MTR organizes transportation of goods in all areas of railway communications in Baltic States, Russia and CIS countries, Western, Eastern and Central Europe. The company is connected to the system "ETRAN" and works within the common personal account of the entire railway network of Russia. Established system of electronic data interchange with JSC "RZD", cooperation with the largest owners of rolling stock provide clients of MTR with right choice and timely provision, coordination of the transport plan as soon as possible, as well as accurate and timely information on the movement of goods.

Special offer: MTR offers shipment with discounts on a railroad rate at sending cargoes on own and rented rolling stock!

MTR offers a wide range of services in transport by rail with minimal participation of the client:

- Cargo transportation services in own and leased rolling stock (hollow bottom and hatch gondola cars, and universal fitting platforms, covered wagons, cement carrier, a platform for timber transportation, tanks for petroleum products, mineral fertilizer carrier, grain carriers) in all areas of railway communication in Russia and CIS, Western, Eastern and Central Europe. Cooperation with major rail operators on favorable terms and ensures the timely provision and the correct choice of rolling stock, the smooth coordination of transport, monitoring the movement of goods in the on-line.
- In the management of MTR is a comprehensive range of rolling stock, which allows to carry out railway transport of a wide range of goods:
 - timber, pulpwood, packaged and rough lumber
 - tracked and wheeled vehicle
 - oversized cargo
 - rolled metal products and pipes
 - equipment
 - building construction and tanks
 - containers
- Dispatching control of freight traffic and traffic control, fleet management of cars.

- Providing integrated services to shippers and consignees. At the stations of the Latvian railway to carry out loading and unloading MTR employs its own team of certified slingers. All the rolling stock provided by MTR, meets the necessary standards and specifications. Loading and lashing the cargo is carried out in accordance with the Rules for Cargo Stowage when you move them by rail.
- Alert the recipient of the date and time of arrival of the goods and advice on organization and design of transport.
- Sending oversize, problematic and dangerous goods, refrigerated unit, general goods in covered wagons.
- MTR assumes the development of the necessary drawings of fastening of oversized and heavy cargo on the rolling stock and their coordination in the relevant units of Railway Roads. The company's specialists, if necessary, go to make measurements on the area of the client.

Financial stability of MTR allows you to use when working with clients flexible financial scheme of payment.
